A PRECISE MEASUREMENT IS A VALUABLE PIECE OF INFORMATION. AN IMPRECISE MEASUREMENT ISN'T.

We produce a wide range of high quality measuring instruments and standards and have done for over 50 years.

Our range of products covers all aspects of resistance and temperature measurement. Our resistance meters range from hand-held micro ohmmeters to transformer winding resistance meters. We pride ourselves on accuracy and reliability of measurement with our entry level model having 10 micro ohm resolution.

We offer a wide range of micro ohmmeters so we can provide the best instrument for your resistance measurement needs.

To compliment our range of units we also have all the accessories you could ever need, these range from cable clamps with built-in water baths to a calibration resistor.

We also have an industry leading range of thermometers, these units are upgradeable to take up to 8 extra channels, giving 10 input channels, this makes our units ideal for use in medical autoclaves where 9 channels are required for measuring, with one channel for reference. Our thermometers offer accuracy of 0.01°C, with a resolution of 0.001°C. We also offer the ability to mix and match between PT25, PT100 and thermocouples, these features make this range of units unchallenged in the industry.

Cropico also have a range of Resistance Decade boxes and Resistance standards. We have Resistance Decade boxes covering ranges from 0.001 ohm to 1 tera ohm. Some of the high accuracy decade boxes are suitable for PT100 simulation. Our Resistance standards are among the most stable in the world, having typical stability of 0.001% over the year, this is achieved by using only the best and most carefully selected components.

We also believe that flexibility is key to customer satisfaction, therefore, if you want special jigs, fixtures or cables please let one of our dedicated staff know and we will be able to work out a solution.

RESISTANCE MEASUREMENT

Cropico specialise in low resistance measurement and offer a variety of ohmmeters to cover the various applications and customer circumstances. Typical applications are listed on the next page.

Some applications and testing standards require special leads and jigs for connecting to the sample under test. We offer a wide range of connecting leads, and have a number of standard jigs available. We will always be happy to supply special jigs if required, all we need is the drawing, a description of the application, or a sample of the item to be measured.

These application notes are intended to explain good measurement practice and highlight some of the more common sources of error.

Four Terminal Measurement

When measuring resistance below 100 ohm it is advisable to use a four wire measurement technique, this is often referred to as a Kelvin or Thomson configuration. By using this type of measurement configuration the connecting lead resistance is not included in the measurement, and the need for lead balancing and nulling is eliminated.

The measuring current is passed through the unknown resistance RX using the C1 and C2 leads. The placing of these leads is not critical but should always be outside the P1 and P2 leads. The Volt drop across the RX is measured across P1 and P2 and these should be placed at exactly the points to be measured. The measuring current is simultaneously passed through an internal reference standard in the ohmmeter and the

volt drop across RX is compared with the volt drop across this internal standard. From the ratio of these two volt drops the resistance value of RX is calculated and displayed. Because the same current is passed through both the standard and the RX and the ratio is calculated, the current does not need to be a precise value, all that is required is that the current is stable for the period during which each measurement is made, typically 0.5 seconds.

The most common cause of errors when making low resistance measurement is due to poor or inappropriate connection of the RX. Connections should be clean, mechanically firm and free from oxides which can cause an insulating effect.

Measuring Current

It is a misconception by a lot of customers that they must have a high measuring current, the higher the better they believe. This was true of the older digital instruments and their predecessor, the Kelvin Bridge. High currents were needed to realise sufficient volts across the RX for measurement.

For example $RX = 0.001\Omega$

Measuring Current	Volt Drop	Voltage Measurement Required for Resolution of 1Ω
1 Amp	1mV	1 V
10 Amp	10mV	10 V
100 Amp	100mV	100 V

With today's measuring components and techniques we are able to reliably and consistently measure these low voltages and make reliable and accurate measurements at the low currents. The disadvantages of using high currents

are; added cost, added weight to instrument, increased size of instrument and less measuring time when batteries are used. Test current heats up the RX and changes its value, and possible introduction of thermal E.M.F's which will affect the reading accuracy.

There are however, some applications where Test Specifications demand higher measuring currents and there is an argument that says a higher test current also tests the mechanical integrity of joints, i.e. if only a strand of wire is making the connection a high test current would burn away this strand. We believe there are better and more reliable ways of testing a joint's mechanical integrity.

Possible Measurement Errors

Poor Connection:

Most causes of measurement error can be traced back to poor or inconsistent connection to the object under test. In many cases it is desirable, if not essential, to make a jig to suit the particular component, this ensures that the P1 P2 connections are always made at the same point on the sample. We offer a variety of jigs and test leads, detailed in the product accessory sections.

Thermal E.M.F:

Another source of error can be thermal E.M.F. When two dissimilar metals are joined together an E.M.F. can be generated (thermocouple effect). Most ohmmeters use a dc measuring system to ensure true resistance, and not impedance, is measured. If the RX is also generating an E.M.F. it is obvious that this will add or subtract to the E.M.F. measured at the P1 P2 connections. This is overcome by making two measurements and reversing the current C1 C2 connections on the second measurement. The two readings are averaged to give the correct answer; $RX = (R1 + R2)/2$.

Most of the Cropico ohmmeters have the ability to select forward or reverse measurement current and to automatically average the two readings thus displaying the correct value.

Simple precautions should also be taken when making connections. The material used should be carefully selected, for example Nickel Plated Brass connecting clips can cause very large thermal E.M.F.'s to be generated when connected to copper wires. For best results unplated copper or brass leads and fittings should be used.

Typical Applications

There are many reasons why resistance of material is measured, and here are a few:

■ Manufacturers of components such as resistors, inductors and chokes all have to verify that their product meets the specified resistance tolerance, end of production line and quality control testing.

■ Manufacturers of switches, relays and connectors all need to verify that the contact resistance is below pre specified limits, end of production line testing and quality control.

■ Cable manufacturers must measure the resistance of the copper wires they produce. Resistance too high means that the current carrying capability of the cable is reduced, resistance too low means that the manufacturer is being too generous on the cable diameter using more copper than he needs to, this can be very expensive.

■ Installation and maintenance of power cables, switchgear and voltage tap changers require the cable joints and switch contacts to be of the lowest possible resistance thus avoiding the joint or contact becoming excessively hot. A poor cable joint or switch contact will soon fail due to this heating effect. Routine preventative maintenance with regular resistance checks ensures the best possible life performances.

■ Electric Motor and Generator manufacturers need to determine the maximum temperature reached under full load. To determine this temperature, the temperature coefficient of the copper winding is used. The resistance is first measured with the motor / generator cold i.e. at ambient temperature, the

unit is then run at full load for a specified period and then the resistance measured again from the change in resistance value, so the internal motor / generator temperature can be determined. Our ohmmeters are also used to measure the individual coils of a motor winding to ensure there are no short or open circuit turns and that each coil is balanced.

■ Those in the Automotive Industry need to measure the resistance of Robot Welding Cables to ensure that the weld quality does not deteriorate. Cropico products can also be used to measure battery lead crimp connectors, air bag detonator resistance, resistance of wiring harnesses and quality of crimp connectors on components.

■ Fuse manufacturers need to measure resistance for quality control.

■ Resistance bonding measurements on aircraft and military vehicles must be measured. It is necessary to ensure that all equipment installed in aircraft is electrically connected to the air frame, this includes galley equipment. Tanks and other military vehicles have the same requirements. Producers and users of large electrical currents all need to measure distribution joint resistance, bus bars and connectors to electrodes for electroplating.

■ Railway utilities including trams and underground railways (Metro) use the equipment for the measurement of power distribution cable joints. The resistance of rail track joints also needs measuring as the rails are often used for signalling information.

DO4A

RUGGED, PORTABLE DIGITAL OHMMETER WITH 415V PROTECTION, DIGITAL CALIBRATION & 4000 COUNT

The DO4A is a practical instrument for low resistance measurement, ideal for use in the workshop, field or test facilities. It is of rugged construction contained in an aluminium case with tilt handle. The DO4A has many advanced features, including protection up to 415 volts rms, digital calibration and long scale length (4000 count). The rechargeable sealed lead acid battery means real portability with more than 14 hours continuous operation, without the problems normally associated with other battery types. Full measurement capability is maintained while charging. For ease of operation the control functions have been kept to a minimum and are clearly marked. It is of course direct reading, warning LEDs illuminate when an open circuit lead condition is detected. Over range and low battery indication is also provided. The DO4A is supplied ready for immediate use with battery, mains cord and measuring leads, no extras are normally necessary. The 15mm LCD provides easy viewing and the instrument can be used in any position for many and varied applications. The test leads provided have a length of 1 metre with spade tags for connection to the ohmmeter terminals. They are terminated in combined current and potential probes that will accept conductor diameters up to 6mm.

KEY FEATURE	DO4A
True 4 wire measurement eliminates lead resistance errors	■
6 push button ranges 40 milli ohm... 4 kilo ohm with long scale length	■
10 micro ohm resolution on 40 milli ohm range	■
Input protection up to 415 Volts rms	■
Zero control thermal E.M.F. compensation	■
Digital calibration	■
Mains / rechargeable battery operation	■
Open circuit lead warning	■
Rugged industrial maintenance free design	■
Universal mains supply 100 / 200 / 220 / 240 Volts +10% - 13%	■

DO6

A COMPREHENSIVE DIGITAL OHMMETER WITH TEMPERATURE COMPENSATION

Covering a wide range of measurements from 1 micro ohm to 200 kilo ohm, the DO6 is a comprehensive measuring instrument with many features incorporated as standard. These benefits include manual and automatic range selection; temperature compensation for copper, referencing the measurement of copper to 20°C; voltage limiting facility for those wishing to measure switch contact resistance to International Standards, the measurement voltage is limited to 20mV. An RS232 serial interface gives full talk / listen capability, making it simple to add to an automated measuring system. Hi / Lo limits may be set over the interface with voltage-free contacts being available on the rear panel. For those wishing to measure inductive circuits e.g. motor windings, a special protection circuit may be initiated thus avoiding any problems that may arise due to induced high voltage.

KEY FEATURE	DO6
True 4 wire measurement eliminates lead resistance errors	■
8 push button ranges 20 milli ohm... 200 kilo ohm	■

D05000 SERIES

A COMPREHENSIVE RANGE OF MAINS AND BATTERY POWERED DIGITAL MICROHMMETERS WITH TEMPERATURE COMPENSATION

The D05000 series of digital micro ohmmeters offer flexibility of measurement with high accuracy and exceptional functionality. The D0500 series encompass all the features required in an ohmmeter in one practical instrument.

This series of instruments have programmable measuring current in 100 steps, ensuring that we have a model in the range suitable for your application.

Automatic temperature compensation references the measurement to 20°C and Hi / Lo limits permits sorting of components with the minimum of fuss. The D05000 series all have the ability to take an external PRT 100 sensor, this is easily plugged into the socket on the front of the unit.

All these functions are available as standard as well as a data logging function which stores up to 4000 date and time stamped readings. Statistical analysis of these values allows you to display the Max / Min / Average values as well as the peak to peak and standard deviation.

The range of D05000 instruments is ideally suited for laboratory testing of samples, production line testing, and with the addition of the IEEE-48 or PLC interfaces, the D05000 series may be remotely controlled and integrated into an automated testing system.

When the units are used in the fast measuring mode they can easily do 50 measurements per second.

These features are available on all of the models in the range. The D05001 only differs from the D05000 in that it can be mains and battery powered. The D05002 has a lower current capability than both of the other models.

DO7PLUS

RUGGED DIGITAL MICROHMMETER FOR LOW RESISTANCE MEASUREMENT, WITH BUILT IN TEMPERATURE COMPENSATION

The DO7Plus is a 10A Microhmmeter, suitable for applications within Aerospace, Utilities, Cable or Machine Manufacturers or where a cooling curve is required to plot peak resistance. Sealed in an IP67 case (when closed or IP53, lid open) it is ruggedly constructed to ensure durability.

The DO7Plus has a backlit LCD graphics panel, full QWERTY keyboard, temperature compensation via optional PT100 probe, and built in coefficients for Copper and Aluminium as well as user defined. Full cooling curve facilities are built in, with real time graphical plotting on the LCD. Data log memory contents can be plotted and a curve fitted to calculate the peak resistance value when $t=0$.

The unit has a display length of 60000 counts and auto averaging of forward and reverse measurement removes thermal emf differences. Connectivity is improved with both USB and RS232 for data downloading. The internal memory holds up to 1000 date and time stamped readings and which can be viewed on the LCD or downloaded with the free software provided, as CSV file to a PC for further analysis.

The data log memory using the latest FRAM technology which offers unlimited read/write cycles and over 10 years of data retention, without relying on internal batteries.

The unit has built in rechargeable batteries which will provide up to 1 hour of continuous use at 10A, and up to 20 hours at all other ranges.

KEY FEATURE	DO7 +
On screen real time graphical plotting cooling curve facilities with peak resistance value calculator	■
It's fast, reading rate of 2 readings per second	■
Measuring ranges from 6 mohm to 6 Kohm	■
Resolution 100 nohm to 6 mohm range	■
Backlit LCD graphic panel with programmable timer for battery conservation	■
Single pulse measurement for fast resistance tests	■
Continuous measurement current for inductive tests	■
Full test lead continuity testing and diagnostic display	■
Multi lingual - Display available in English, French, German, Spanish or Italian	■

DO7

RUGGED DIGITAL MICROHMMETER FOR LOW RESISTANCE MEASUREMENT

The DO7 is a practical instrument for low resistance measurement, ideal for use in the workshop, field or test facilities. It is of rugged construction in a sealed ABS plastic case with lid and carrying handle. The DO7 has many advanced features, including protection up to 415 volts rms at the measuring terminals, digital calibration and long scale length, 6000 count. Rechargeable batteries mean real portability with more than 1 hour of continuous operation on the lowest ranges, and 20 hours on all others. Battery charge indicators are provided. The internal charger will boost charge to 90% of full charge, switching automatically to a trickle maintenance charge. Warning LEDs illuminate when an open circuit lead condition is detected. A front panel socket provides a serial RS232 output for connection to an external printer or PC, and a socket is also provided for the connection of an external start switch, e.g. a foot switch. The DO7 is supplied ready for use with batteries, mains cord and test leads, no extras are normally necessary. For special lead sets we offer a variety of different styles which are listed on the accessories page, together with calibration standards.

DO7E

RUGGED DIGITAL MICROHMMETER FOR LOW RESISTANCE MEASUREMENT

The DO7e is a very rugged yet compact and portable digital micro ohmmeter for the measurement of low resistance. Using a rechargeable sealed lead acid battery with built-in charger, the DO7e is capable of measuring with a current of 10 Amps on the lowest range. The DO7e has been designed with the latest solid state and microprocessor techniques to ensure the very best in measurement, reliability and features. Automatic range selection, forward and reverse current measurements with auto average and a remote start socket are all included as well as an energy saving power down mode.

DO7010

RUGGED PORTABLE MICRO OHMMETER FOR LOW RESISTANCE MEASUREMENT

The DO7010 is a very rugged and very compact, portable digital ohmmeter for the measurement of low resistance. Using rechargeable and replaceable NiMh batteries with external charger the DO7010 is capable of measuring with a current of 1 and 10 Amps on all except the highest range. The DO7010 has been designed with the latest solid state and microprocessor techniques to ensure the very best in measurement reliability and features. The LCD graphic display panel gives full information regarding the measurement configuration, and a single measurement start button ensures that the operation is simple and easy to use. The measurement may be triggered when the measurement leads are applied to the device under test ensuring fast single person operation. A remote hand terminal is also available which will fully control the DO7010 at a distance of up to 15 metres. The data logging function also permits test sequences to be downloaded from an Excel spreadsheet and the measured results uploaded back to the spreadsheet.

KEY FEATURE	DO7010
True 4 wire measurement eliminates lead resistance errors	■
4 ranges 6 milli ohm to 6 ohm	■
Resolution 1 micro ohm on 6 milli ohm range	■
Graphics Display with backlight 3 languages	■
1 and 10 Amp measuring current even on the 600 milli ohm range	■
Forward and reverse current measurement	■
Auto average of forward and reverse measurement	■
True zero offset	■
Built in test resistor for confidence check	■
Data logging with up to 1000 readings stored with date and time stamp	■
Hi-Lo limits with audible and visual warning	■
Automatic measurement trigger when leads are connected to DUT	■
Small size and light weight <4Kg	■
RS232 interface with option remote terminal to enable operation up to 15 metres distance	■
Rechargeable NiMh batteries with charge indicator and easily replaceable battery pack	■

Measurement

4 Terminal Kelvin/Thomson principle eliminates error due to lead resistance. Open circuit measurement voltage =5Vdc

Display

240 x 64 dot graphics LCD with backlight

Ranges

4 ranges with auto range mode. Two selectable measuring currents for each range

Terminals

The measurement leads are connected via Jaeger connectors and a full range of lead configurations are available

Working Temperature

0°C to +50°C rel. humidity up to 80% non condensing

Storage Temperature

-20 to +50°C

Safety

Conforms to EN 61010-1, Main instrument Class 111 (SELV), Battery pack Class 111 (SELV), external mains charger Class 111

Dimensions

390mm x 160mm x 270mm (W H D) approx

Mass

4kg approx

Battery

The DO7010 is supplied with battery fitted. The batteries are NiMH and the charger is external. The battery pack may be removed from the front panel when discharged and a replacement charged pack inserted. This ensures minimum down-time when making measurements

Remote Terminal

The remote terminal emulates the DO7010 front panel and all functions and readings are fully controllable up to 15 metres from the ohmmeter. Connection is made through the RS232 terminal

Lead Sets

We offer a wide variety of lead sets with 3 sizes of Kelvin clip or handspikes. Lead lengths may be up to 100 meters total loop

Data Logging

The DO7010 has data logging modes. The first will store each reading with record number date and time. The second is a sequence mode which will store values with operator ID, serial number etc

DO8000

RUGGED, PORTABLE DIGITAL TRANSFORMER WINDING RESISTANCE OHMMETER

The DO8000 can measure and save more than 10,000 high resolution test results, along with transformer nameplate data. With its expansive memory, bright LCD screen, and concise reports from its built in printer, this model sets the standard in test equipment. The DO8000 can store hundreds of files, each containing a virtually unlimited number of resistance measurements, with tap and winding details, and several fields of information about the transformer, its location, and the operator. The file manager makes this information easy to locate, open, view, and print past results. The DO8000 features 4.5 digit resolution and 0.25% accuracy for precise measurement of winding resistance. Input channels have sophisticated sigma-delta D/A converters and notch filters to eliminate the effects of substation noise.

KEY FEATURE	DO8000
True 4 measurement eliminates lead resistance errors	■
Wide measuring range 0.1 milli ohm to 2 kilo ohm	■
Resolution 0.1 micro ohm on 2 milli ohm range	■
High accuracy 0.25% rdg + 0.25% fs	■
2 channel measurement for primary and secondary windings	■
Data logging with large colour alpha numeric storage for test results	■
Robust power supply for fast testing of large power transformers	■
Open circuit limit mode 20 mV / 50 mV maximum	■
Interface RS232 and USB	■

Operating Principle

The resistance of windings is measured by passing DC current through the unknown resistance, and measuring the resulting voltage drop. The DO8000 calculates the resistance by the formula $R = E/I$.

Winding resistance challenges

Measuring small resistance in a highly inductive environment can be a challenging task. The voltage across an inductor is defined by the formula $V = L di/dt$. Some power transformers have inductance (L) of over 1000 henrys, therefore minute changes in current will result in undesirable voltage swings that can make it impossible to measure the DC resistance of the transformer windings. The Cropico DO8000 addresses this challenge in several ways so that the instrument is able to achieve stable resistance readings on the largest of transformers in record time.

- The DO8000 uses a powerful, highly regulated and filtered constant current source to drive current through the windings.
- The DO8000 uses a 30 volt source, which is sufficient to drive the core into saturation where small changes in current have no effect on the measured resistance.
- By connecting primary and secondary in series, speed of saturation is increased because there are more Amp turns contributing to the flux in the core. The resistance measurement of both windings are made at the same time, on channels A & B.

DO8000 SPECIFICATIONS

Measurement

MTS

EASY TO USE MILLI OHMMETER 4 TERMINAL TEST STANDARD WITH + AND - FULL SCALE VALUES

This milli ohmmeter's test standards are designed for the simple and easy calibration of low resistance ohmmeters and Kelvin / Thomson bridges. The four terminal resistance values are switch selected and provision is made + and - full scale values. A four terminal zero value may also be selected, thus making zero and full scale calibration of instruments simplicity itself. Two models are available , the MTS1A which has 11 values from 1 milli ohm to 100 kilo ohm and the MTS2 has 10 values from 400 milli ohm to 400 kilo ohm making it ideally suited for the calibration of digital instruments with a long scale length of 4000 or 6000 count. The test standards are housed in a rugged bench portable aluminium case with tilt handle. The internal standards are manufactured from premium quality resistance wire with low temperature and load coefficients. The units are supplied complete with a calibration certificate.

400μΩ	±0.1%	0.04	10A	<10ppm

Working Temperature

+5 to +40°C

Storage Temperature

+5 to +50°C

Dimensions

215mm x 88mm x 250mm (W H D) approx

Mass

2.8kg approx

Terminal

4mm binding posts will accept spade tags and 4mm banana plugs. Low thermal E.M.F. types are used for the potential terminals

Switches

Combination switch with low thermal contacts for the potential selection and low resistance contacts for the current selection

D05000-CS

CALIBRATION STANDARD FOR D05000

The calibration Standard D05000-CS is designed to enable the full calibration of the Digital microhmmeter type D05000, The resistance ranges are adjusted to a nominal accuracy and the actual value is measured and recorded on the calibration certificate. The value on the calibration certificate is the value that should be used when calibrating the D05000.

KEY FEATURE	D05000-CS
True 4 terminal standards	■
Switch selectable values	■
Polarity Reversal switch	■
Four terminal zero	■
PT100 calibration	■
Upto 10A calibration current	■

CO2/CO2-A/CO3

COST EFFECTIVE CABLE CLAMPING DEVICES FOR PRECISE MEASUREMENT

KEY FEATURE	CO2	CO2-A	CO3
1M long reference measurement	■	■	■
Test unit cross sections 0.1mm to 100mm	■		■
Test unit cross sections 0.1mm to 1000mm		■	
Integrated Water bath for temp correction	■		■
Current connections up to 100A	■	■	■
Guide rail for support	■	■	

During the manufacture of wires, rails, cables and conductors, the electrical conductivity (resistance) must be checked for compliance with specified values. In conjunction with one of our range of digital ohmmeters, the clamping devices are used in the cable industry for production monitoring and quality assurance.

CO2

Adjustable clamp support: measurement length of up to 1000mm.
 Test unit cross-sections: ranging from 0.1mm² to approximately 100mm² Current connections: designed for up to 100A. Potential tap: routed to 4mm standard terminals using material with low thermal E.M.F. Dimensions (height x width x depth): 1300mm x 120mm x 150 mm. Weight: Approximately 8.5kg

CO2-A

Measurement length: 1000mm. Clamping device: designed for cross sections of 1mm² to 1000mm². Distance between voltage and current-clamp: 420mm. Dimensions (height x width x depth): 170mm x 2100mm x 250 mm. Weight: Approximately 25kg.

CO3

Measurement length: 1000mm in a temperature controlled water bath. Clamping device: designed for cross sections of 1mm² to 1000mm². Constant water temperature ensured by a two position controller and an integrated circulation pump. Precise temperature measurement with an integrated sensor. Operating range: 25 °C to 60 °C, tolerance +/- 0.5 °C. Current connections: designed for up to 100A. Output of the integrated heating filaments: 2kW Voltage supply: 230V, +6% - 10%. Mains frequency: 50/60 Hz. Power consumption: approximately 2.2kVA. Device protection: in accordance with VDE 0411. Dimensions (height x width x depth): 300 x 2100 x 750 mm. Without wire holder: (height x width x depth): 300mm x 1330mm x 500 mm. Weight (without water): Approximately 80kg.

THE 3000 SERIES

PORTABLE HIGH ACCURACY TEMPERATURE INDICATOR WITH FULL INSTRUMENT CONTROLS, PT25, PT100 AND 13 THERMOCOUPLE TYPES

Cropico has produced a family of precision digital thermometers, the series 3000. Three units, all with 1 Millikelvin resolution for RTDs, are offered with a range of standard features and a list of "mix-and-match" options which will provide a very high degree of flexibility.

The units can be used by Quality Assurance departments throughout the process industries for calibrating temperature probes, particularly in ISO-9000 applications, and they also have wide-ranging use where high accuracy temperature measurement is essential and where values have to be stored for data processing.

Two-channel input provides A, B or A-B measurement on an LCD display, and front panel keys are provided for the most commonly used functions. Pull-down menus provide further functions, such as the selection of thermocouples. Probe characteristics can be stored for optimum accuracy, and the measuring current can be reduced by half power to check the probe's self heating.

Other features include mains or rechargeable battery operation, with built-in charger, and two interface options - RS232 and IEEE-488 - by plug-in cards. An analogue output, via a BNC socket, is another option.

The 3000 series include an inbuilt data logger which can store upto 4000 date and time stamped readings. Recall the data from the front panel or send to a PC via either RS232 or IEEE both of which are options.

The 3000 series offer ease of use. Password protected digital calibration and a large clear backlit LCD graphics panel ensure the 3000 series are easy for all levels to use.

The 3000 series have the ability to take reverse measurements switching the polarity then computing the average to eliminate the error source. This reduces the thermal E.M.F. which most resistance thermometers suffer from. The thermal E.M.F error can be greater than the quoted accuracy of an instrument. If you need small measurement uncertainty for high temperature PRT work, you need this feature.

KEY FEATURE	3000	3001	3002

THE 3000 SERIES

Display	LCD Graphics panel with backlight
Terminals	4mm safety sockets and 6 pin Lemo socket
Working Temperature	0°C to +40°C re. humidity 80% max. non-condensing
Storage Temperature	-20°C to +50°C
Mains Supply	100/120/220/240 Volts +10% to 13% 47Hz to 63Hz 40VA
Safety	EN 61010-1 EMC-EN 61236
Dimensions	219mm x 315mm x 110mm (W H D) approx 1/2 19" Rack 2 1/2 U high
Mass	5.5kg approx
Calibration	Digital Pass code protected
Battery	Sealed Lead acid battery with internal intelligent charger. 14 hours approx operation from full charge, may be used whilst charging

Inputs	Thermocouples via 4mm sockets in copper block on 19mm pitch, adaptor plugs available for direct thermocouple wire connection. PRT via Lemo low thermal sockets. 3002 model has low thermal E.M.F sockets only
Average	Automatic average and display of PRT measurements with forward and reverse current
Auto Temperature Compensation for Thermocouples	<i>Automatic Internal</i> - Automatically references measurement to temperature of 20°C or other user defined temperature. User coefficients may be used <i>Automatic External</i> - External Pt100 sensor temperature manual value can also be used
HI / Low Limits	Limit values can be set over entire measurement range
Interfaces	Interface cards are available as option, only one card may be fitted. <i>RS232</i> : To specification ANSI/EIA/TIA/-232-E-1991 <i>IEEE-488</i> : Conforms to ANSI-IEEE Std 488, 1-1987 and performs the following functions: SH1, AH1,T5,TEO, L3, LEO, SR1, RL1, PPO, DT1, CO, E2. Interface may be set to 'talk only' mode to permit stand alone printer output <i>Scanner Option</i> : 2 additional input cards may be fitted, each card has 4 measurement channels. Measurement and scan sequences may be configured from the front panel. Full accuracy is maintained
Thermocouples	The above readings apply to values with the reference junction switched off. Reference junction uncertainty when used in automatic mode is better than 0.1°C at 20 °C with a deviation of not more than 0.01 °C/°C over the range 0 to 100 °C. RTD types linearised to ITS-90 conforms to EN 60751. Thermocouples are not available on 3002 model

Scanner Options

The 3000 series scanner option provides for multi inputs of either thermocouples or Pt100 sensors. Two channel cards may be fitted each with four input channels, which may be either thermocouples or Pt100. The flexibility of the system is such that scanner cards can be interchanged giving 10 channels for Pt100, 10 channels for thermocouples, or 4 channels thermocouples plus 4 channels Pt100 plus the two front panel inputs, which may be either Pt100 or thermocouples. No other instrument in this price range gives the versatility and accuracy of measurement to match the 3000.

ACCURATE AND RELIABLE RESISTANCE THERMOMETER SIMULATORS

KEY FEATURE	PT100s
High calibration accuracy	■
2 models available	■
Rugged construction metal case	■
High quality switching	■
High accuracy wire wound resistance elements	■
Calibration traceable to international standards	■
Calibrated to IEC 751, DIN 43760 and BS1904	■

Designed for the accurate and reliable simulation of platinum resistance thermometers (Pt100), the simulators Pt100S/2 and Pt100S/1 offer 2 low cost options. Both models are calibrated to international standards.

Pt100S/1: Uses 2 wire simulation and 12 set points calibrated direct in °C.

Pt100S/2: Suitable for 2, 3 and 4 wire connection and incorporates the high quality Cropico SP1 switch together with high accuracy wire wound resistance elements. This construction gives both high performance and permanence of calibration.

RM6

WIDE RANGE, COMPACT & VERSATILE 6 DECADE RESISTANCE BOX WITH DOUBLE POLE SWITCHING

This small, cost effective decade box further enhances our comprehensive range, offering excellent value for money. This 6 decade model has a total resistance of 11.1111 Mega ohm with a resolution of 10 ohm. The accuracy of $\pm 1\%$ is achieved using metal film resistors which have a power rating of 0.4 Watt, the maximum specified voltage is 250V. Designed for durability the case is hardwood with an anodised aluminium top panel which is clearly marked with the switch position numbers and the decade values. The size is only 287 x 65 x 65 mm. The RM6 is a valuable addition to any workshop or laboratory offering a wide range of values with minimum cost.

KEY FEATURE	RM6
6 decades	■
Range 10 ohm to 10 Mega ohm	■
Accuracy 1%	■
Low cost	■

RM6 SPECIFICATIONS

Wood with anodised aluminium top panel

RM6N

SPACE SAVING, COMPACT & VERSATILE 6 DECADE RESISTANCE BOX WITH WIDE RANGE

KEY FEATURE	RM6N
6 decades	■
Range 10 ohm to 10 Mega ohm	■
Accuracy 1%	■
Low cost	■

The RM6-N is a space saving 6 decade resistance box, 3 models are available covering the range 1 ohm to 111,111 Mega ohm. An additional 1 kilo ohm resistor is available at the terminals enabling the user to make a simple divider. The RM6-N incorporates 0.6 watt resistors with a specified accuracy of $\pm 1\%$. The maximum permissible voltage is 250 V dc. Designed for durability and ease of maintenance, the case is high impact polystyrene and the size is only 190 x 140 x 70 mm. The RM6-N's constitute an ideal tool for use in all electrical and electronic laboratories or workshop environments offering a wide range of values with minimum cost.

RM6N SPECIFICATIONS

Case

High impact polystyrene

RM8

WIDE RANGE, COMPACT & VERSATILE 8 DECADE RESISTANCE BOX WITH DOUBLE POLE SWITCHING

The model RM8 decade resistance box is designed to compliment our range of resistance boxes, offering a very wide range 0.01 ohm to 1 Mega ohm in a compact and versatile unit. The low decade steps of 0.01 ohm enable very high resolution, when simulating resistance values and the power rating is 1.0 watt per coil. The RM8 uses double pole switching to minimize the effects of contact resistance. The lower value decades (0.01 and 0.1 ohm) are manufactured from Manganin resistance wire and the other decades from selected metal film resistors. This offers good stability combined with excellent load and temperature coefficients. Housed in a hardwood case with metal panel the size is only 254 x 145 x 80mm and the connections are with 4mm binding posts that will accept spade or banana plugs.

KEY FEATURE	RM8
8 decades	■
Wide range 0.01 ohm to 1 Mega ohm	■
Accuracy 0.1%	■
Exceptional value for money	■
Compact size	■
Power rating 1W / coil	■

Mass

0.95 kg

Resistors

Power Rating: 1 watt per resistor

Lower decades (0.01 & 0.1 ohm) Manganin wire wound,
other decades metal film

Temperature coefficient: 10ppm/ $^{\circ}$ C

Switches

Rotary 2 poles in parallel, contacts silver plated brass with positive click mechanism. Insulation >50,000 Mega ohm

Residual Resistance

< 0.1 ohm

Test Voltage

1kV dc between terminals and panel

CM5-N

5 DECADE CAPACITANCE COMPENSATION BOX TO COMPLEMENT THE RM6-N

KEY FEATURE	CM5-N
5 decades	■
Range 100 pF to 11.111 uF	■
Accuracy 5%	■
Residual capacitance 30 pF at zero setting	■
Residual capacitance compensation	■

A five decade capacitance box to complement the RM6-N range of resistance decades. Styled in the same ergonomic desk case, the CM5-N is a useful addition to any laboratory, as well as for industrial and educational use. The required capacitance is set by means of rotary switches with skirted knobs and stators giving a clear indication of the dial setting. The capacitors are a combination of polycarbonate and polystyrene, generously rated minimum 160 Vdc with a good dissipation factor and high insulation. A useful feature of this unit is the residual capacitance being compensated for on the 10 x 100pF and 10 x 1nF dials so that the actual value of the dial setting appears at the terminals.

CM5-N SPECIFICATIONS

Case

Light alloy, black anodised to give maximum heat radiation
Thermometer Tube: Slotted extending the length of the resistance element

Label

Each standard is fitted with a label that describes its characteristic and operating parameters

CR

HIGH ACCURACY, COST EFFECTIVE 4 TERMINAL CALIBRATION RESISTOR

This range of low cost 4 terminal calibration resistors combine high accuracy, class 0.02, long term stability and permanence of calibration in a compact unit. Constructed using carefully selected low temperature coefficient Manganin or Zeranin wire, depending upon value and mounted to ensure mechanical stability, these resistors will provide a cost effective addition to any laboratory or workshop. Typical applications include calibration reference, accurate current measurement instrument calibration and accurate shunt resistors.

Four great brands. One great reputation.

The Seaward Group is made up of four individual brands specialising in different aspects of electrical safety testing. Each is passionately dedicated to providing technologically advanced solutions to the highest possible standards within highly specific markets.

A Total Solutions way of thinking

Each brand focuses on the total package that will make the testing or measurement process quicker and easier for customers. It's not just about the products we sell, but the service as a whole. We think integration, after sales care, calibration and training courses are just as important as the Testers themselves.

Portable Electrical Safety Instruments

Providing Testers, software and services for appliance testing, fixed installation testing and high voltage testing.

Industrial Safety Instruments

Clare is the market leader in the design and manufacture of test equipment for in-line production and manufacturing conformance.

Precision Instruments

Cropico, the newest addition to the Seaward Group, has over 50 years experience in the development of precision measurement solutions, specialising in advanced resistance measurement instruments.

Biomedical Safety Testing

Rigel Medical is at the forefront of electronic biomedical test and measurement equipment, software and accessories.

A world leading group of companies

At the Seaward Group we believe our reputation for product innovation and technical expertise is second to none and reflects our in-depth knowledge and understanding of all the markets in which we operate.
